

PRE-MIX TURF ACTIVATOR

Saves up to 50% water use

No smell

lasts up to 90 days

Improves soil structure

Safe for the environment

NPK: 5.4:2.2:2 plus Trace Elements

Is suitable for all types of turf

High Humic and Fulvic compounds

Adds carbon to your soil for long term benefits

Application Rates

350-400 kg per ha new turf applications

10-15 kg-per 100m² Golf & Bowling greens

30-40 kg per 100m² coring/renovating

ENVIRONMENT**

Biogreen Overview

Biogreen is an Australian company developing the largest peat resource in the southern hemisphere, a reed sedge peat resource at Swan Marsh, near Colac, in south western Victoria.

Biogreen is actively investing in returning the mined areas back to a wetland and creating an environment to attract bird and flora populations.

Our customers include seed growers, turf growers, shires, councils, sports ovals, bowling greens, golf courses and race courses.

Instant Turf

Lilydale Instant Lawn: *“There is no doubt about the benefits of Superior Boost for use with turf. The humic acid is one of the keys involved in enhancing root development” ... “when we used it on our turf, the juvenile plants stayed stronger and healthier”*

Biogreen Peat Mine—Swan Marsh Victoria

Custom Blends

Biogreen’s research staff are committed to improving product quality and developing successful product applications in the turf market.

Our Team can work with you to develop products to your requirements. Call and ask us how.

Product List

Pre-Mix Turf Activator

Peat Magic Turf Pellets

Superior Boost

Fibrous Peat (4 mm & 10 mm screened)

Turf wicket Soil (10 mm screened)

Kick-Start Turf Soil Conditioner

Product available in small bags,
Bulk bags and B-double loads.

Benefits of Peat

Biogreen peat contributes to more efficient fertiliser and water use, better root development, healthier plant growth and greater drought tolerance.

Biogreen peat will:

Improve soil structure

Increase water holding capacity

Improve cation exchange capacity

Increase pH buffering capacity

Enhance biological activity

Increase soil fertility

“Biogreen peat has 28 different trace elements and holds over 100% of its weight in moisture.”

Turf wickets

AGCSA: *Adding Biogreen peat at 10% by volume to a sandy soil almost halved hydraulic conductivity.*

Sports Turf: *Biogreen turf Wicket soil meets the requirements for construction of new wicket tables or as topdressing in existing wickets where the soil is black clay.*

Bowling greens

Phil Ford: *Mixing peat pellets with sand at 10-20% by volume will improve moisture holding ability.*
