

SUPERIOR BOOST®

for Turf

Superior Boost is manufactured from a blend of fertiliser and 100 percent organic **Biogreen** fibrous peat.

In commercial situations, such as golf courses, instant turf farms, parklands and council areas, **Superior Boost** provides superior results.

These include:

- Superior greening of lawn due to the **Humic & Fulvic acid** content
- Increased fertiliser efficiency due to the **high cation exchange (60-100 meq%)**
- A steady release of nutrients over **at least 90 days** in typical Australian climates. (By contrast, even synthetic-coated sustained release fertilisers will only perform properly over a relatively narrow temperature range.)
- Is able to significantly **improve the water-holding capacity** of the soil by at least threefold compared to other commercial products – save \$\$\$\$ on irrigation.
- Does not have an **odour** and is completely safe to children and animals

Garry Lusk from Lilydale Instant Lawn - “there is no doubt about the benefits of Superior Boost – for use with turf, the humic acid is one of the keys involved in enhancing root development”.. .. “when we used it on our turf, the juvenile plants stayed stronger and healthier, with less water”.
