

## **Native Garden Boost: NPK 4.3:0.1:2.1 Plus Trace Elements**

Native Garden Boost is a blend of fertilisers and organic Biogreen Humus rich peat providing essential nutrients while improving soil health and productivity.

Many Australian native plant species suffer phosphorous toxicity when fed quite low amounts of phosphorous.

Therefore many Australian plants will benefit from applying very low or no phosphorous.

Such plant species can be found in the genera:

Acacia, Adenanthos, Banksia, Bauera, Beaufortia, Boronia, Bossiaea, Brachysema, Chorizema, Davesia, Dryandra, Eutaxia, Grevillea, Hakea, Hypocalymmal, Sopogon, Jacksonia, Lechenaultia, Leucospermum, Protea, Pultenea

### **Native Boost Benefits**

- No harmful microbes often carried by animal based manure.
- Nutrient provision to 90 days.
- No manure smell.
- High humus content for increased nutrient availability and fertiliser efficiency.
- Long soil life through extremely slow decomposition.
- Improved capacity to limit the influence of pH altering practices.
- Improved soil structure for improved water use efficiency and reduced erosion.
- Increased biological activity for greater disease suppression and nutrient cycling.
- Increase soil fertility.

All benefits lead to increased soil and plant health.
