

Humic Acid Benefits

Biogreen humic acid is extracted from Biogreen Humus rich peat to create a 13% concentrated liquid fertiliser/ soil conditioner

Soil Structure

- Reduces erosion
- Increases water use efficiency
- Improves water holding capacity (sandy soils)
- Improves drainage (clay soils)

Cation Exchange Capacity

- Enhances nutrient availability (sandy soils)
- Reduces leaching (sandy soils)

pH buffering

- Reduces effects of pH altering farming practices

Biological Activity

- Suppresses disease

Plant Physiology

- Increases plant energy metabolism
- Increases seed germination
- Enhances root initiation and growth
- Increases cell nutrient uptake

Practicality of liquid form

- Cheaper transportation
- Easier application (e.g. fertigation)
- High relative Fulvic acid content improves foliar uptake
